Selection is the name of the game!

GEI gives you more than you expect.

A giant step forward in the development and manufacturing of games that give you the advantage.

Greyhound Electronics Inc. has now developed and applied the latest technology for video amusement games that gives you, the operator, the capability to change games simply by replacing a chip.

Satellite board makes changing games a snap.

This "game changing" feature incorporates a satellite board which holds the game ROM's. To change games all you do is replace any game chip or the complete satellite board.

Up to eight games versions in one machine.

With three models to choose from, GEI has the right combination for you. Model 102 which provides 2 games or the popular Model 103 which has three games and for 1984, our new Models 104 and 108 which have 4 and 8 game versions. Whichever model you select, you get the opportunity to choose from these five different games: Video Draw Poker with a Hi-Lo feature; Casino Slots, superior to anything on the market; Black Jack; Beat-the-Spread, also known as Acey-Duecy or Red Dog; and Rolling Bones, our newest craps game.

Power failure protection

Special circuitry has been employed that consistently monitors the line voltage. If a drop in power is sensed due to outage, brown-out or glitches, the data is automatically locked in insuring that important accounting information is never lost. This circuit will also return the player to the exact stage of an existing game with credits intact as they were before the power interruption.

Waterproof glue is used to protect and seal the top and sides.

Specially designed, 13-inch Wells-Gardner color monitor for superior graphics.

Extra coin entry is provided to eliminate late night service calls.

"Action Entry" coin entrance makes it easy for players to insert coins.

Chrome fingerboard with buttons in alignment with corresponding cards.

Buttons are keyed into the panel which guarantees horizontal alignment in one straight line.

Handsome wood grain cabinet provides richness of appearance and ease of maintenance.

Wide levelers are used for cabinet alignment.

Height: 60 7/8" Width: 23" Depth:24"

Available option: $1 and $5 bill acceptor (Rowe).

Pick your own games.

Outstanding color graphics

A high-quality, 13-inch Wells-Gardner color monitor has been specially designed for use by GEI. With twice the pixel density of conventional monitors, GEI graphics have received world-wide recognition for their clarity, fine detail and richness of color. With features like these, it is easy to see the extra effort that GEI has put into the design of their systems.

Simplified power supply

A power supply that outputs two voltages: +5 Volts DC for the mother board and +12 Volts DC for the fingerboard lights, allows for reliable, efficient operation and facilitates troubleshooting...if necessary.

Bookkeeping made easy

Two columns of bookkeeping information keep you up to date on the profitability of each game. The weekly information column can be reset to zero but the "to date totals" cannot be erased.

Copying made difficult

Our boards cannot be copied. If an attempt is made to duplicate the main boards or to decode the programs all that will be supplied is scrambled binary code.

Quality control each step of the way

GEI's finished products require little maintenance due to the unique quality control procedures that are employed. With a total of 12 stations where different components of each unit are assembled, each station thoroughly checks all the work it does in addition to checking all the work of previous stations. This procedure requires much additional time and expense but results in a highly superior product. A built-in self test allows each operator to perform 13 test checks to see that all the systems are operating properly.

GEI PUTS IT'S CARDS ON THE TABLE

All of the great features of our floor units are now available in a swivel mounted table or counter top model. With additional features that include: a slanted top to prevent drinks from being placed on it, specially designed face plate with two side shrouds to eliminate glare and a coin entrance that is positioned on the front of the unit for easy access.

Now players can enjoy all the excitement and challenge of our games from the comfort of their chairs.

A color monitor that displays graphics in fine detail and vibrant colors make each and every game come alive on the screen.

So if you're looking to turn the tables on declining profits...turn to GEI. User friendly video games for the amusement industry.
